A. Register

1. General information

- Use case's name: Register.
- Actors: Guest
- Requirements: None

2. Short description

- From the Main page, a guest chooses the text *Register*. The interface for the function will be displayed.
- The guest fills out the *Register Form*, the click the button *Register*. The system will validate the textboxes, if so, a success message will be displayed, otherwise, the warning message what is wrong.

3. Basic scenarios

- From the Main page, a guest chooses the text *Register* at the upper-right side of the website. The interface for the function, containing a form consisting of text-boxes *FullName, DateOfBirth, Email, Phone, Username*, and *Password* , will be displayed.
- The guest then fills all textboxes and clicks the button *Register*, the system will validate the textboxes, if so, a success message will be displayed.
- The guest clicks the button *Close* in the message, the system will redirect to the Main page

4. Exceptional scenarios

- If the values of textboxes are not valid, a warning message will be displayed. The guest clicks the button *Close* in the message, the message will disappear and he/she then modifies the textboxes. Reasons for invalidation are:
    - At least one textbox is not filled
    - The username exists
    - The password does not contain at least 8 characters, 1 uppercase letter, 1 lowercase letter, 1 digit and 1 special character
    - The date of birth is in the future
    - Email is not the right format (Regex: `^[a-zA-Z0-9._%+-]+@[a-zA-Z0-9.-]+\.[a-zA-Z]{2,}$`)
    - Phone is not the right format (Regex: `^0[0-9]{9}$`)
